Allowable Subject Matter

1. Claims 1-21 are in condition for allowance.
2. The following is an examiner's statement of reasons for allowance: the subject matter of the independent claim could either not be found or was not suggested in the prior art of record. The subject matter not found was a body having an interior, the interior having a fluid channel between the proximal port and the distal port, a valving element that controls fluid flow between the proximal and distal ports, including a resilient member forming a fluid chamber within the interior of the body, and a plug cooperating with the resilient member to provide an internal seal that is spaced from the proximal port, and the plug radially expanding the resilient member when the valve transitions from closed to open mode, causing the fluid chamber to have a larger volume when in open mode than in closed mode, and also causing the fluid channel to have a larger volume when in the open mode than in the closed mode, substantially as claimed.
3. The closest prior art of record is US Patent No. 6,761,286, issued to Py et al. Py does not disclose a fluid channel between the proximal port and the distal port, a valving element as claimed to control the fluid channel, or the volume dimensions when the valve transitions from open to closed mode. Py in fact works opposite of the claimed invention in relation to the volumetric relationships.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
